

Cleatskins™ Golf are designed to fit snugly and securely. You will soon discover your favorite way to quickly stretch them on your golf shoes. However, here are two of the most popular ways:

1. Pop the heel of the Cleatskin inside out by pulling outward and down with your fingers while pushing up with your thumbs.

2. Slide the toe of your golf shoe fully into the toe of the Cleatskin (a) and position the inverted heel cup of the Cleatskin beneath (and touching) the heel of the golf shoe, then simply roll the sides of the Cleatskin heel cup up the golf shoe heel. (b).

Or

1. Slide the toe of your golf shoe fully into the toe of the Cleatskin.

2. Cup the bottom of the Cleatskin heel in the palm of your hand and stretch it back (away from the toe), then up and over the heel of the golf shoe.
